- Tailwindcss and some experience with Sass (SCSS)
- Experience building responsive layouts across different devices
- React.js
- Next.js
- Component libraries : Material UI and Radix UI
- State management libraries : Redux and Zustand
- animation libraries (framer motion)
- Data fetching and API handling : React query

PROJECTS

- **Taky chess**: built a multiplayer online chess game using Next.js serverless functions and Pusher.js for websockets.

- **Sky sentry**: weather front-end website built with react and powered by Open-Meteo weather forecast API.

- **Type Fusion**: created a web application that tests typing speed and accuracy while giving an overview about typing performance, the app also features a simple leaderboard that lists the top ten users based on the score of their latest performed test.

- **Tetris**: recreated the popular game of Tetris using typescript, touch support included.

- **Werdi (وِردي)**: a fullstack serverless web application built with **Next.js** app router, **Prisma** and **Radix UI** for tracking islamic remembrances and completion consistency of a muslim similar to habit tracking applications (still WIP).
